

INSTITUTO POLITECNICO NACIONAL

ESCUELA SUPERIOR DE CÓMPUTO

Ejercicios:

ALGORITMO DEL GRADIENTE DESCENDENTE

Inteligencia Artificial

Profra. Vanessa Alejandra Camacho Vázquez

Grupo: 6CM3

Nombres de los integrantes:

- Aguirre Lanto Víctor Manuel
- Gasca Frago Pedro
- Guevara Badillo Areli Alejandra
- Montiel Toro Arael de Jesús
- Ramírez Lozano Gael Martin

Lunes, 13 de diciembre, 2025

$$h = \sum_{i=1}^n x_i w_i + b$$

$$\sigma(x) = \frac{1}{1 + e^{-x}}$$

$$\sigma'(h) = \sigma(h)[1 - \sigma(h)]$$

$$\delta = (y - \hat{y}) \sigma'(h)$$

$$\Delta w_i = \eta \delta x_i$$

$$w_{iN} = w_i + \Delta w_i$$

1. Neurona simple que usa la función de activación sigmoide.

$$x_1 = 4$$

$$x_2 = 2$$

$$b = -0.6$$

$$\eta = 1$$

$$w_1 = 0.4$$

$$w_2 = 0.5$$

$$y = 0.5$$

$$\hat{y} = 0.88$$

ÉPOCA 0

① Predicción inicial

$$h = (0.4)(4) + (0.5)(2) + (-0.6) = 2$$

$$\hat{y} = \sigma(2) = \frac{1}{1 + e^{-2}} = 0.8807$$

② Calcular el error y el gradiente

$$\sigma'(h) = 0.8807 \cdot (1 - 0.8807) = 0.105$$

$$\delta = (0.5 - 0.8807) \cdot 0.105 = -0.0399$$

③ Actualizar los pesos

$$\Delta w_1 = 1(-0.0399) \cdot 4 = -0.1596$$

$$\Delta w_2 = 1(-0.0399) \cdot 2 = -0.0798$$

$$w_{1N} = 0.4 + (-0.1596) = 0.2404$$

$$w_{2N} = 0.5 + (-0.0798) = 0.4202$$

④ Verificación del nuevo error

$$h = 0.24(4) + 0.42(2) + (-0.6) = 1.198$$

$$\hat{y} = \sigma(1.2) = \frac{1}{1 + e^{-1.2}} = 0.7685$$

ÉPOCA 1

- ② Calcular el error y el gradiente

$$\sigma'(h) = 0.7685 \cdot (1 - 0.7685) = 0.1780$$

$$\delta = (0.5 - 0.7685) \cdot 0.1780 = -0.0478$$

- ③ Actualizar los pesos

$$\Delta w_1 = 1(-0.0478)4 = -0.1912$$

$$\Delta w_2 = 1(-0.0478)2 = -0.0956$$

$$w_{1N} = 0.4 + (-0.1912) = 0.0484$$

$$w_{2N} = 0.5 + (-0.0956) = 0.3242$$

- ④ Verificación del nuevo error

$$h = 0.048(4) + 0.324(2) + (-0.6) = 0.242$$

$$\hat{y} = \sigma(0.24) = \frac{1}{1 + e^{-0.24}} = 0.559 \approx 0.56$$

ÉPOCA 2

- ② Calcular el error y el gradiente

$$\sigma'(h) = 0.560 \cdot (1 - 0.560) = 0.246$$

$$\delta = (0.5 - 0.560) \cdot 0.246 = -0.0148$$

- ③ Actualizar los pesos

$$\Delta w_1 = 1(-0.0148)4 = -0.0592$$

$$\Delta w_2 = 1(-0.0148)2 = -0.0296$$

$$w_{1N} = 0.0484 - 0.0592 = -0.0108$$

$$w_{2N} = 0.3242 - 0.0296 = 0.2946$$

- ④ Verificación del nuevo error

$$h = -0.0108(4) + 0.2946(2) - 0.6 = -0.54$$

$$\hat{y} = \sigma(-0.54) = \frac{1}{1 + e^{0.54}} = 0.486$$

ÉPOCA 3

② Calcular el error y el gradiente

$$\sigma'(h) = 0.486 \cdot (1 - 0.486) = 0.250$$

$$\delta = (0.5 - 0.486) \cdot 0.250 = 0.0035$$

③ Actualizar los pesos

$$\Delta w_1 = 1(0.0035)4 = 0.014$$

$$\Delta w_2 = 1(0.0035)2 = 0.007$$

$$w_{1N} = -0.0108 + 0.014 = 0.0032$$

$$w_{2N} = 0.2946 + 0.007 = 0.3016$$

④ Verificación del nuevo error

$$h = 0.0032(4) + 0.3016(2) - 0.6 = 0.016$$

$$\hat{y} = \sigma(0.016) = \frac{1}{1 + e^{-0.016}} = 0.5039$$
